Summary

Fresh Computer Engineering graduate with hands-on experience building modern front-end applications using **React**, **TypeScript**, and **JavaScript**. Consistently delivered real-world projects on time across diverse domains, demonstrating a strong grasp of component-based architecture and responsive UI design. Known for taking ownership of tasks end-to-end, communicating clearly with peers and supervisors, and adapting quickly to new tools and workflows. Actively integrates **AI tools** into the development process to improve code quality and delivery speed. Looking to contribute clean, efficient, and user-focused front-end solutions to a forward-thinking team.

Education

Tanta University

Bachelor of Engineering in Computer Engineering

Tanta, Gharbia

Sep. 2020 – Jul. 2025

Experience

Digital Egypt Pioneers Initiative (DEPI)

Tanta, Egypt

Trainee React Web Developer

Apr 2024 – Oct 2024

- **Front-End Development** Independently completed 14 progressive tasks – from HTML/CSS landing pages to full React applications – consistently meeting deadlines and receiving positive feedback from supervisors.
- **React Development** Developed modern front-end applications using React, TypeScript, and JavaScript, following component-based architecture and industry best practices.
- **Responsive UI** Built responsive UIs with HTML5, CSS, and Bootstrap, applying UX/UI design principles to deliver polished and accessible user experiences.
- **AI Integration** Explored and applied prompt engineering techniques to integrate AI tools into the development workflow, improving productivity and output quality.

NTI — Digital Egypt Youth

Tanta, Egypt

C and Embedded C Programming

Jun 2023 – Jul 2023

- **C Programming** Completed 3 hands-on projects covering data structures, algorithms (sorting/searching), pointers, memory management, and low-level hardware interaction, demonstrating strong analytical thinking and attention to detail.
- **Embedded Systems** Collaborated on a School Management System using Embedded C, applying memory-mapped registers, preprocessor directives, and startup code for microprocessors.

Projects

WorldWise – Travel Tracking Website [github] | Travel tracking web app using React Router, Leaflet maps, Context API, and JSON Server to manage and visualize visited cities. (ReactJS, Oct 2025)

UsePopcorn – Movie Rating Web App [live] | Movie info and rating app with watched list tracking, custom hooks, public API integration, and localStorage. (ReactJS, Aug 2025)

W3EY – E-Learning Website [live] | Interactive e-learning platform using React and Vite with dynamic navigation, reusable components, and state-driven UI. (ReactJS, Feb 2025)

AI Resume Analyzer [live] | Web app with auth for CV upload and job description input; uses Puter.js AI to analyze ATS compatibility and extract strengths and weaknesses. (ReactJS, TypeScript, Jan 2025)

Mealify – Restaurant Landing Page [live] | Responsive landing page with Bootstrap grid, chef/gallery/contact sections, and JavaScript interactions. (HTML, Bootstrap, JavaScript, Mar 2022)

Skills

Languages: JavaScript, TypeScript

Technologies: React, Bootstrap, Tailwind, Redux, Redux Toolkit, HTML/CSS

Tools: VS Code, Figma, Adobe XD, Postman, GitHub
